

Facebook as a problem

Alex Hache, Sanjay Sharma, Lonneke van der Velden

Research Question

Facebook as a problem: Facebook groups directed at Facebook: What moves do they make, what spaces do they go to?

Reformulated questions:

Focus on the alternative platforms:

1. How do they resonate on Facebook?
2. What type of spaces or environments are they?

Method

1. Which platforms resonate on Facebook?

Make list of alternative platforms

Query this list in Facebook

Analyse content of top group and/or pages for their discourse, based on list of categories (e.g. privacy, decentralisation, surveillance, censorship)

the problem

- Query the names of the platforms in Discover text

Canceled because of personalised results despite new Facebook account and because lack page description

- Query the names of platforms in Google Scraper, query for member count and analyse top groups

Google wave (91900)

Thimble (75000) Crabgrass (24100) Elgg (23800) xmpp (20800) identi.ca (14400) Buddypress (20400)

Diaspora (8890) status.net (5820) Pinax (3560) Cynapse (1410) Appleseed (312) Lorea (60)

Query: "keyword" site:facebook.com/group
Method: Resonance names platforms in Facebook groups by Google scraper

Resonance platforms in Facebook groups 07-07-11

Apps and Websites

Edit your settings for using apps, games and websites.

Block Lists

Edit your lists of blocked people and apps.

Controlling How You Share

Learn more about your privacy on Facebook.

Profile settings

You can update your personal profile info here so people know more about you.

Nickname

1-64 lowercase letters or numbers, no punctuation or spaces.

Full name

Homepage

URL of your homepage, blog, or profile on another site.

Bio

Describe yourself and your interests in 140 characters

Location

Where you are, like "City, State (or Region), Country"

Share my current location when posting notices

Tags

Tags for yourself (letters, numbers, -, ., and _), comma- or space-separated.

Language

Preferred language.

Timezone

In which timezone are you?

Automatically subscribe to whoever subscribes to me (best for non-humans).

Platform	Code maturity	Privacy Support	Encryption of network (http or https)	Encryption by users	Actions to use it	License	Distance: How many clicks since you log in to privacy settings?	How many fields inside privacy settings?	Page entitled privacy settings? (Yes, No)	Name of the page where are the privacy settings	Geolocalisation (Yes/No)	How many settings activated by default?	Visibility by default (private, friends, network, internet, customized)
StatusNet	Production	Content and data of The riseup.net Status Network are private and confidential. But the Privacy page is empty.	http	No	Enter your email for instant access	GNU Affero General Public License.	2	4	No	Profile settings	Yes	2	network
Crabgrass	Production	Simple permissions to add contacts or join working groups	https	No	Download and install software in your server	GNU Affero General Public License.	2	10	No	Settings	No	5	network
Diaspora	Production	Planned but couldn't verify it – Diaspora makes sharing clean and easy – and this goes for privacy too. Inherently private, Diaspora doesn't make you wade through pages of settings and options just to keep your profile secure.	https	No	Sign up for an invitee account+ Download and install software in your server	GNU Affero General Public License.	?	?			?	?	?
Elgg	Production	Excellent - granular visibility and privacy settings for each plugin installed and for each item posted	http or https	No	Download and install on your server	GNU General Public License, version 2.	2	3 ways, all over the place	No	Profile, widget, post	No	1	network
Cyn.in	Production	Profiles, customizable access control + but terms of privacy tells that "Cynapse collects personal data about its customers in a number of ways."	http	No	Download and install on your server + install in a virtual machine hosted by cyn.in	GNU General Public License, version 3.	?	?	?	?	?	?	?

Myspace	Red	Orange	Orange	Orange

Conclusions

Not much information on privacy on ASP's

Complex default visibility settings

Privacy not at one place with one explanation (distributed)

ASP based on decentralization are not very inclusive (many technical steps, own servers, installation processes, etc.)

Two beta-platforms are very visible on Facebook

It is not just about keeping things “private”: visibility related to the issue of trust in collectives or groups

Facebook as a problem

Thank you.
